Bobo Dang received B.S. in School of Chemistry and Chemical Engineering from Nanjing University and Ph.D. in Department of Chemistry from the University of Chicago. He is currently a post-doctoral scholar in the Department of Pharmaceutical Chemistry at UCSF. Fascinated by protein molecules, he has focused research on studying the structure, function, and biological activities of protein molecules through chemical synthesis, computational design and biological display technologies. He also has strong interests in developing protein based technologies to probe biological systems and to advance protein therapeutics. Bobo Dang has published many papers in high-profile journals including J. Am. Chem. Soc., Angew. Chem. Int. Ed., Neuron, PNAS.
